At Home Daily Fit for Work Screening Questionnaire

We require you to review the following questionnaire prior to leaving each morning for work. This is to assist in determining if you are fit to attend St. Bernadette School during the COVID-19 pandemic. Please post this in a high traffic area in your home so you can remember to review it each morning.

St. Bernadette School reserves the right to refuse admittance to any person on the basis of symptoms that are related to COVID-19.

Risk Assessment:

| | | | |
|---------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|-----|----|
| 1. | In the past 24 hrs, have you experienced: fever, worsening cough, shortness of breath, difficulty breathing, sore throat, and/or runny nose? | Yes | No |
| 2. | Have you returned to Canada from outside the country (including USA) in the past 14 days? | Yes | No |
| 3. | Did you have close contact* with someone who has a probable** or confirmed case of COVID-19? | Yes | No |
| If you answer "YES" to any of the above, you are not permitted to enter into the school and you must self-isolate. | | | |

***Allergy Assessment:

| | | | |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|-----|----|
| 4. | Does you suffer from allergies that could be misinterpreted as COVID-19 symptoms? | Yes | No |
| If you answered "YES", the school needs an assessment from your family doctor for our files plus any appropriate allergy medication must be with you while at work. | | | |

If you answered YES to the above questions 1-3, please go to <https://bc.thrive.health> and complete the Self-Assessment tool to determine your need for COVID-19 testing. If you are an employee, please follow up with the Principal as to your return to school procedures.

If you answer "NO" to all of the above, you can proceed to work.

***Close contact** includes providing care, living with or otherwise having close prolonged contact (within 2 meters) while the person was ill, or contact with infectious bodily fluids (e.g. from a cough or sneeze) while not wearing recommended personal protective equipment.

****Probable case** is a person with clinical illness who had close contact to a lab-confirmed COVID-19 case, while not wearing appropriate personal protective equipment, OR a person with clinical illness who meets the COVID-19 exposure criteria, AND in whom laboratory diagnosis of COVID-19 is inconclusive. *Clinical illness* of a probable case is new onset/exacerbation of following symptoms: fever (over 38 degrees Celsius), cough, shortness of breath (SOB)/difficulty breathing, sore throat or runny nose. *Exposure criteria* for a probable case is a person who, in the 14 days before onset of illness: had any history of travel outside of Canada; OR had close contact with a confirmed or probable case of COVID-19; OR is a close contact of a traveler with acute respiratory illness who returned from outside Canada in the previous 14 days; OR had a laboratory exposure to biological material (e.g. primary clinical specimens, virus culture isolates) known to contain COVID-19.

*****Allergies** sometimes present the same symptoms as COVID-19. Saying you have allergies is not an acceptable response for being at work while you are symptomatic. An assessment from your family doctor is needed so school staff can make an informed decision if you become symptomatic. Suffering from allergies does not exempt you from attending work or from being sent home if you are symptomatic.
